HOW TO TONE B&W IMAGES

1. Load your image and select the top layer, (which will normally be the B&W conversion layer) so that when you create this layer it is above the B&W conversion layer.

2. Select Layer/New Adjustment Layer/Hue & Saturation.
3. Tick the Colorize box and using the Hue slider select the Hue that you want

4. Alter the saturation slider until you reach the depth of colour you want, then click OK.
Here are two examples of this easy method of toning
